Driven terminal
A mixed input: b = (1, −0.6, 0.8)
One fixed medium, many inputs
The three basis fields above determine the response to every input:
E(b) = b₁E₁ + b₂E₂ + b₃E₃
For the mixed input, decoded x is
x1 = +0.245759
x2 = -0.264489
x3 = +0.260838
Relative equation error: 0.0331%
